

Phase 4: Process Automation (Admin)

Goal

Automate booking, warranty, and service workflows so the system saves time, ensures accuracy, and reduces manual work.

1. Validation Rules

Ensure data quality:

- On Service Appointment: End Date must be after Start Date.
- On Warranty: Expiry Date must be greater than Issue Date.
- On Booking: Amount must be greater than 0.

Setup: Object Manager → [Object] → Validation Rules → New Rule.

2. Workflow Rules (Legacy – Optional)

Salesforce recommends Flows instead, but try one example for learning.

- Example: When a Booking record is created, send an auto email to the customer.

Setup: Setup → Workflow Rules → New → Select Object → Define Criteria → Add Action (Email Alert).

The screenshot shows the Salesforce Setup interface for Workflow Rules. On the left is a navigation menu with 'Process Automation' expanded, showing 'Workflow Actions' and 'Workflow Rules' (highlighted). Below it are 'User Interface' options like 'Console Settings' and 'Translation Workbench'. The main content area is titled 'Workflow Rules' and shows the configuration for a rule named 'Warranty_Confirm_Email'. A yellow banner at the top promotes Flow Builder. The 'Workflow Rule Detail' section includes buttons for 'Edit', 'Clone', and 'Deactivate', and a table with fields: Rule Name, Active (checked), Object (Warranty), Evaluation Criteria, and Description. Below this is a table for 'Created By' and 'Modified By' with user names and timestamps. The 'Workflow Actions' section has an 'Edit' button and a table for 'Immediate Workflow Actions' with columns for Type and Description, showing an 'Email Alert' action with the description 'Warranty_Created Confirmation.'

Workflow Rule

Warranty_Confirm_Email

Go with the flow! With Flow Builder, the future of low-code automation, you can do everything you do with workflow rules — and more! Salesforce plans to retire workflow rules and recommends building automation in Flow Builder. [Tell Me More](#) | [Migrate your workflow rules to flows](#)

Immediate Workflow Actions

Type	Description
Email Alert	Warranty_Created Confirmation.

3. Process Builder (Legacy – Optional)

Mostly replaced by Flow.

- Example: If Booking Status = “Approved”, auto-update “Warranty Status” = “Active.”

Setup: Setup → Process Builder → New → Choose Object → Criteria → Immediate Action.

4. Approval Process

Use for financial or important approvals.

- Example: If Booking Amount > ₹50,000, send for Manager Approval.
- Manager can Approve or Reject.

Setup: Setup → Approval Processes → New → Add entry criteria (Amount > 50000) → Add Approver → Define final actions.

No activities to show.

Get started by sending an email, scheduling a task, and more.

No past activity. Past meetings and tasks marked as done show up here.

- Screen Flow
- This will guide users through filling a Warranty form instead of using the standard layout.

- Scheduled Flow

Setup: Setup → Flows → New Flow → Pick Type (Record-Triggered, Screen, etc.).

6. Email Alerts

- After Approval → Booking Confirmed, auto-send email to Customer with confirmation.
- Before Warranty Expiry (7 days left), auto-send reminder email.

Created the flows for:

- Warranty creation (Screen Flow)
- Scheduled flow for expiring warranties
- Email alerts after approval or before expiry

Configured the email alerts and linked them to templates

-

Setup: Setup → Email Alerts → Define Template → Add to Flow/Workflow.

7. Field Updates

- When Approval = 'Approved' → Auto-update Booking Status = 'Confirmed'.

Subcategory

- After Expiry Date reached → Warranty.Status = "Expired"

The screenshot displays the Salesforce Flow Builder interface for a flow titled "Expired Warranty Check - V1". The flow is currently in an "Active" state. The left-hand pane shows the "Errors and Warnings" section, indicating there are 0 errors. The main canvas shows a flow diagram starting with a "Record-Triggered Flow" trigger, followed by a "warranty status" action to "Get Records", and ending with an "End" node. The top bar includes navigation icons, a "Select Elements" button, and a "Last saved" timestamp of 9/20/2025 at 11:33 PM.

8. Tasks

create a Task automatically after a Service Appointment is approved using a Record-Triggered Flow in Salesforce.

The screenshot shows the Salesforce Flow Builder for a flow named "status approval - V1". The flow is active and was last saved on 9/20/2025 at 11:52 PM. The flow diagram on the left shows a "Record-Triggered Flow" trigger, followed by a "create task for technician" action to "Create Records", and ending with an "End" node. The right-hand pane shows the configuration for the "Create Records" action, where the object is set to "Task". The "Set Field Values for the Task" section shows the following mappings:

Field	Value
Subject	Prepare for service
Related To ID	\$Record.Id
Assigned To ID	\$Record -- Technician_c
Status	Not Started
Priority	Normal

9. Custom Notifications (In-App / Mobile)

Goal: When a Service Appointment is approved, the assigned Technician gets an in-app notification.

Setup: Setup → Notifications → Define Custom Notification → Use in Flow.
